Criteria	Marks	Group Self Evaluation		Obtained Marks		
Application features you committed to in your Project Proposal	50					
Store data locally	10					
Data sync	15					
Store data on cloud	10					
GET/POST images from/on server using Web APIs	10					
Lists and search boxes	10					
Signup and Login with Authentication	10					
Push Notifications	10					
UI Submission	10					
Frontend Submission	15					
Bonus: Any Wow Factor in your application	Upto 10					
TOTAL MARKS	150					
Note on Completeness:						
Completeness measures how fully, correctly, and smoothly every committed feature has been implemented.						
Completeness means:						
-- If a feature includes an Insert, it must also have Update and Delete.						
-- No part of the application should crash, lag, or behave inconsistently.						
-- All functions must be fully implemented, not partially working.						
-- The app must run smoothly, like a professional app.						
-- The demo must be flawless, without bugs or broken flows.						
-- Any feature committed in the original proposal must be delivered in complete working form.						
Completeness is not a separate feature, it evaluates how well all existing features are finished and polished.						
Completeness Formula						
Each criterion will have its own Completeness Percentage, denoted as C_i (where 0% means completely incomplete, 100% means perfect).						
If a criterion has M_i marks, then:						
Obtained Marks for Criterion $i = M_i \times C_i$						
Where: M_i = Maximum marks for that criterion, C_i = Completeness percentage for that criterion (0 to 1)
